

STREAMLINE™ X

THE TOUGHEST
THINWALL DRIPLINE
EVER MADE

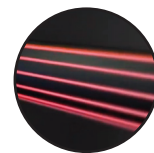

INDUSTRY'S HIGHEST QUALITY AND MOST DURABLE DRIPLINE

The new extra tough dripline with a unique ribbed surface acts as a barrier between the ground and the pipe, making installation and retrieval smoother than ever before.

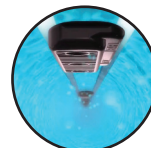

Tough on the Outside

External ribs protect the pipe from installation damage with maximum abrasion resistance.

Tough on the Inside

Internal ribs minimize damage to dripper during installation.

STREAMLINE™ X

THE TOUGHEST THINWALL DRIPLINE EVER MADE

Why settle for a lower quality 'tape' product? Streamline X is a superior choice for your irrigation needs. It's a non-pressure compensating thinwall dripline with improved durability.

Streamline X is the best choice for seasonal row crop irrigation since it offers seamless construction, a low filtration requirement and flap outlet protection which deters soil ingestion and root intrusion.

SPECIFICATIONS

Exterior Ribbed Surface

Prevents against potential dripline damage during installation and retrieval.

Wall Thickness

630 Series: 5, 6, 8, and 10 mil
875 Series: SU, 6, 8, 10 mil

Interior Ribbed Surface

Internal ribs minimize damage to dripper during installation.

ReGen™ (875 Series)

Contains recycled driplines.

Injection Molded Dripper

Made of high quality polyethylene material welded into a wall of seamless tubing.

High Strength Polyethylene Tubing

Improved durability and tensile strength for higher operating pressures.

Value Added Packaging

Directional arrows on package assist with installation and identification. Reel end graphics provide guidelines for easier installation.

Low Filtration Requirement

120 Mesh
